Food Service Operations

Within the university, your food service operations may consist of residence hall dining, food courts, executive dining, catering, or standalone restaurants. Hospitality Hub's Food Service Operations module will assist in managing each of these areas very efficiently:

- Full inventory management functionality
- Multi-unit inventory, with multiple locations within each unit
- Automatic unit of measure conversion for weight and volume units
- Electronic receipt capability through national and regional food suppliers
- Automatic transfers and electronic receipts of deliveries
- Electronic submittal of purchase orders to those suppliers that support it
- Compare and improve theoretical vs actual usage
- Suggestive ordering and order guides to assist in optimal order placement
- Nutritional and allergen information stored by item
- Full recipe functionality, allowing recipes to be built from inventory items or sub-recipes
- Ability to specify all preparation and production information for each recipe
- Ability to create complex rotating service menus and record actual usage
- Future forecasting for menus based on previous usage
- Menu cost analysis by meal or per guest
- Full food production reporting, from daily ingredient preparation sheets to full recipe reports
- Automatic import of nutritional information from food supplier electronic files
- Fully customizable reporting - consolidate critical data with our flexible reporting capabilities
- Ability to interface with all major POS systems
- Sales analysis by PLU and menu mix across units and consolidated units
- Time slot reporting analysis to report sales by time period
- Ticket level detail reporting and searching
- Poll registers to download sales / time records and ticket level detail
- Easily manage labor scheduling. Calculate allowed hours based on sales percent of prior time periods. Input employee availability, class restrictions, and time off. Selected employees will not be seen when scheduling their unavailable hours. Select paid/unpaid lunch times for employees. Email employee's individual schedules
- Sales forecasting functionality. Generate projected sales based on historical actual results. Include sales adjustments for promotional items and special events
- User definable menu structure and screen layouts
- User profiles drive security, access, menu options, and screen views
- Menus can be configured to allow for free form navigation of the system, or restrict access by user to ensure completion of tasks and work assignments efficiently
- Payroll and employee on-boarding interfaces with most major payroll software providers
